WHAT GOOD ARE SURVEILLANCE SYSTEMS IF NOBODY IS CONSTANTLY SURVEILLING THE FOOTAGE?

INTRODUCTION

The Problem

- Incidents are **detected after they occur**
- CCTV requires **someone to actively monitor** footage
- Large amounts of video make **manual monitoring inefficient**
- Communities need a way to **detect and respond to suspicious activity faster**

INTRODUCTION

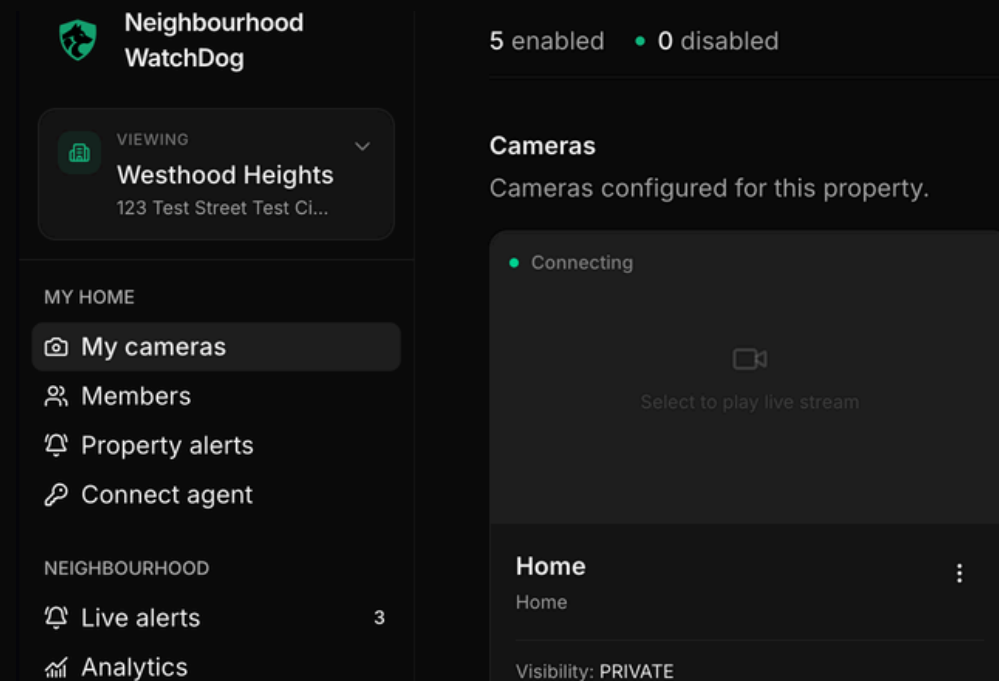

Our Solution

- AI-powered detection **analyses camera streams locally**
- Suspicious activity is **automatically identified**
- Relevant incidents are sent to the central platform
- Users receive a clear, actionable **view of what happened and where**

Two Applications, One Security System

WEB APP

- Provides a **centralised view** of incidents
- Displays **cameras**, locations and detected events
- Allows users to **review and investigate** incidents
- Provides **alerts** and relevant incident information

DESKTOP APP

WatchDog Desktop Agent

Monitor your cameras and control local AI processing from this computer.

Agent Status

Property: 123 Test Street
Test City
Gauteng
1234
Agent: Stopped

Cameras

Camera	Location	Status
Camera x	Front Entrance	Unavailable
Camera	Camera 1	Unavailable
TEST 1 Sep	Camera 1	Unavailable

AI Agent

- Connects to **RTSP camera streams**
- Processes video locally
- Uses **AI model** to detect activity
- Sends the **stream to the website** so that authorized users can view the stream
